UL-U370 Two-Hour Fire Wall Check List

Builder Name _____   Development _____

Building/Lot # _____   Fire Wall Between Unit # _____ and Unit # _____

Framing Phase

- [ ] Two 16 inch OC walls staggered (8inch OC)
- [ ] One inch gap between the two walls
- [ ] Horizontal bracing at the mid-point (this must also be staggered)
- [ ] Sheetrock is to be inserted against firewall at the interior wall intersections, including stairs
- [ ] Framing for sheertrock attachment at floor joist/firewall intersection
- [ ] Attic area is framed identical to the other floor levels. Horizontal bracing every five feet vertically
- [ ] 1st 4 feet of roof decking on both sides of the firewall must be sheetrock or fire treated plywood

Mechanical Installation

- [ ] No HVAC, plumbing or gas lines in the firewall
- [ ] UL approved electrical boxes and wiring utilized
- [ ] Installation accessibility OK for sprayed fiber on Units with mirrored fixtures against the firewall
- [ ] Sheetrock can only be hung on one side of the firewall prior to sprayed fiber installation
- [ ] Sheetrock is installed so sprayed fiber installation can be done on two walls while working out of one unit
- [ ] Sheetrock is installed between any mechanical chase and the firewall

Sprayed Fiber Installation

Note: Compatible sprayed fiber must be used in the U370 firewall. The product is easily identified by its "**terracotta**" color

- [ ] Rec'd copy of U370 firewall Field Test Form by the Certified Contractor
- [ ] Prior to final drywall, inspect fire wall for damage. Call Certified Contractor to schedule repairs
